## Spotlight

### NEW Product Update:

#### BOCK RLM SERIES

The Bock RLM series is iconic in both style and functionality. First developed in the early 1900's to replace the individual overhead lights traditionally used in warehouses and factories, the RLM light fixture, most often characterized by its spun metal reflector and white interior, offered a more efficient lighting solution that provided a broader distribution of light. Bock offers a wide array of RLM options and customizations to fit any of your product needs.

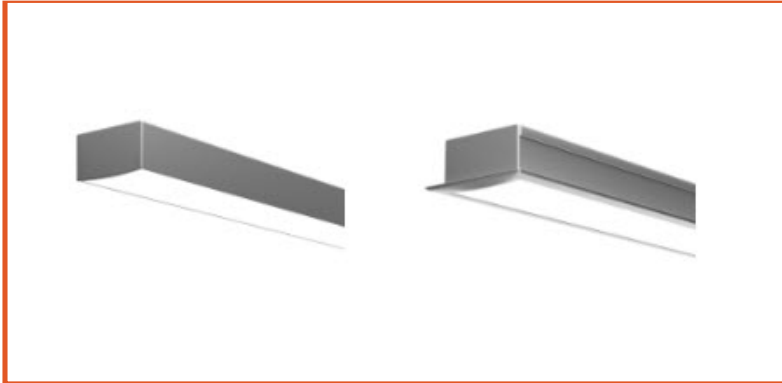

#### ORIGAMX MEDI-O

The OrigamX lighting system was developed for the world's most creative Architects and most critical technical Lighting Designers to enable them to achieve the highest quality of light in the most diverse range of applications - including museums, high-end residential and retail. The MEDI-O performance track head features theatrical grade control and dimming (DMX/RDM), hand picked optics and tightly binned LEDs. The fixtures excel in applications where the quality of light is critical and in low ceiling height applications where discrete, reconfigurable, low profile fixtures and a clean look are desired.

# NEW Product Update:

## ENTRA ESSENCE SERIES

ESSENCE elevates the architecture of any space with premium customizable linear illumination with simplified ordering and optionality including various lens, finish and mounting options.

## LUXFORMAE MAGS

XF Mags Series Magnetic Track Light System offers a new generation of lighting with tremendous flexibility and possibilities. LXF Mags Tracks can be recessed, trimless, surface, or suspended mount. A variety of channel adapters are available for any configuration for inside corners, outside corners, wall-to-ceiling, "T", "L", "4-way Intersections." Powered Rounded sections are also available for ovals and 39" diameter circular configurations.

# NEW Product Update:

## LIGMAN SOLAR AUGUSTA BOLLARD

Modern, contemporary bollard luminaires providing a minimalistic and urban appeal. The Augusta is suitable for indoor and outdoor applications and provides a clean and visually appealing solution for bollard luminaires.

## SPI ZYNN 2" Lines + Arcs

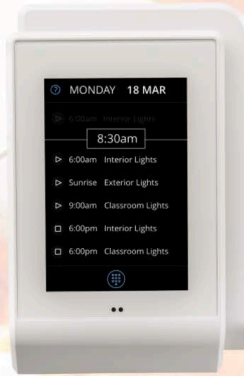

Anything is possible with this creative modular system of luminous lines. Zynn 2" Lines + Arcs makes it fast and easy for you to create extraordinary curvilinear and rectilinear designs—all with standard products. Turn corners, sweep around columns, create geometric shapes, or form intricate patterns with smooth, continuous lines of light. Professional and refined, it delivers up to 960 lumens per foot.

# CONTROLS INSIDER

## nDTC Standalone Timeclock

Available as a single-gang wall-mount device, the nDTC is a cost-effective solution for time-based control in an nLight lighting control zone, eliminating the need for complex networked controllers. Ideal for small-to-medium projects, the nDTC delivers smart, simple configuration, control, and scheduling of nLight devices in one lighting controls system.

The same technology that can be added to an ARP panel is available in this sleek, single gang wall mounted touchscreen for local control. Excellent for corridors or other areas that need time control but do not require a greater networking scheme. Available in White or Black, the nDTC provides scheduling, dimming, switching, occupancy and photosensing with minimal footprint and flexible configuration. Controls up to 32 schedules, up to 127 nLight devices, with onboard password configuration with optional lockout, and a proximity sensor to wake the screen.

## WELCOME to the LINE CARD!

**DESIGNHEURE**

LIGHTING

ÉDITION — FRANCE

Designheure is a contemporary lighting company that is 100% Made in France. Designing timeless and high-end solutions for the lighting industry, the brand embodies the essence of French elegance and luxury. Custom made colors available.

# DYNAMIC DEPOT

The 16500 **DYNAMIC** catalogue now has an expanded representation of reputable, high quality Dynamic Controllers and advanced networking system components available.

Whether you are looking for Static or Dynamic control - DMX, DALI, Artnet, sACN, and even pixel mapping controls are now available, along with switches, processors, converters, decoders, and drivers. Everything you need for Dynamic Lighting Total Solutions. Check out some of the newly unveiled options available on the list below, and our oldies but goodies are still here too!

See the complete list at [16500.com/Dynamic](http://16500.com/Dynamic)

# EDUCATION STATION

## *Understanding Part Numbers*

Looking to part numbers can often be a helpful way to dissect what is being offered by a product. Check out these examples below and see if it helps your ordering process!

What is the difference between occupancy sensor CM and CMR?

- The "R" indicated "Relay" for a line voltage version of this sensor.

What is the difference between nPOD and nPODMA?

- The "MA" represents "Modern Aesthetic", the updated look.

What does nCM PDT 9 RJB stand for?

- nLight Ceiling Mount Passive Dual Technology 9 type lens RJ45 port on Back of sensor

What is the difference between 4426 LED FTN + 4426 LED SWM?

- These submersible fixtures are specified for 2 different underwater environments, SWM for Swimming Pools, and FTN for Fountain applications.
